

Accelerated Recovery and Reimbursement

Eliminate Errors, Delays and Obstacles to Recovery and Reimbursement

Damage can be done in minutes. Recovery can take years.

Removing debris. Repairing infrastructure. Restoring critical services. Disaster recovery can be a long and expensive process. To speed recovery and maximize reimbursement, managers must:

- Track and document resources and activities strictly as they apply to the recovery effort
- Aggregate thousands of pieces of data into a dynamic, intelligent, and searchable system of record
- Minimize cumbersome, error-prone manual record keeping
- Complete and submit exhaustive Federal Emergency Management Agency (FEMA) reimbursement forms
- Maximize reimbursement by ensuring all personnel, equipment and supplies are billed—all at proper rates

Where traditional solutions fall short:

- **Crisis Information Management Solutions** often lack the ability to manage the complexities of tracking, assigning and auditing resource utilization throughout recovery
- **Emergency Operations Center (EOC) status boards** often fail to provide FEMA documentation needed to support recovery

Introducing the Previstar Continual Preparedness System

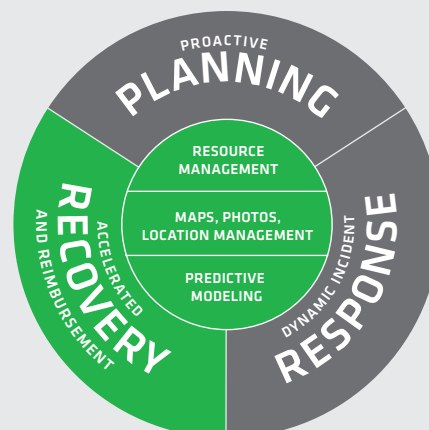

Previstar's Continual Preparedness System (CPS) enables intelligent resource and information management to keep managers on top of complex recovery operations.

The Previstar CPS tracks all activity and automatically updates information regarding all aspects of recovery—from people and equipment, to facilities, supplies and locations. The result: informed decisions and accurate documentation to speed federal reimbursement.

Manage and document all facets of recovery.

Previstar CPS provides intelligent information and resource management to address the key challenges of recovery and reimbursement.

- **Automate Documentation:** Previstar CPS captures all times, places, activities and financial data, ensuring accurate reimbursement while reducing data entry and paperwork needs
- **Align with NIMS Guidelines:** In addition to providing data to automatically populate ICS and FEMA forms, Previstar CPS automates vital National Incident Management System (NIMS) processes
- **Manage Complex Operations:** Previstar CPS automatically manages and updates data on interrelated resources, activities and locations across the entire recovery area
- **Reduce Audit Risk:** Automated data capture and an electronic source document audit trail reduces the risks and workplace disruption of a federal audit
- **Speed time to money:** A single accurate system of record reduces the time it takes to locate data, complete applications, and receive reimbursement

Previstar enables intelligent automated management of resources and processes through all phases of crisis management.

Accelerated Recovery and Reimbursement

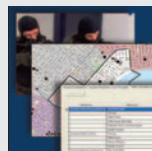

FEATURES AND TOOLS

Supporting NIMS-compliant handling of “all hazards” and “all disciplines,” Previstar enables a consistent approach across jurisdictional levels and functional disciplines. Features for managing disaster recovery and reimbursement include:

A Real-time View of All Recovery Activity

Previstar CPS manages and updates data on complex interrelated recovery resources, providing an accurate real-time window on resource deployments, availability, quantity, status, locations, and more.

Documentation and Reporting

The Previstar CPS provides a single system of record that captures all recovery information and activity, to support FEMA project worksheets and other documentation requirements, including:

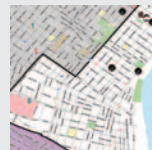

- Equipment utilization
- Labor and other costs and expenses
- Resource requests and utilization
- Damage reports
- Maps
- Photographs

Resource Management

Put people, equipment and materials at your fingertips:

- **People**—Previstar provides contact information, background data and certifications for all available human resources
- **Equipment and Materials**—The Previstar CPS tracks consumable and non-consumable goods, and all relevant data, including equipment type and description, quantity, storage location, serial numbers, and FEMA cost and reimbursement codes

GIS Mapping/Location Management

Previstar provides mapping capabilities to display key elements in the recovery effort, including:

- Resource deployments
- Facility locations
- Embedded links to additional information
- Documents, photos and links to CCTV

Flexible Technology

Previstar is built for easy deployment over the Web or on site. The extensive use of standard, upgradeable hardware and software such as Microsoft™ Outlook and SQL Server, and ESRI™ GIS makes Previstar a cost-effective system that facilitates ease of integration, maintenance and upgrade. Previstar works with leading industry-standard software, and can operate as a standalone solution or work with your existing EOC software.

A Proven Solution

Previstar has a track record of success in a variety of planning, response and recovery operations, including:

- **Hurricane Katrina Recovery:** Helping the City of New Orleans save tens of millions of dollars in response, recovery and reimbursement efforts associated with Hurricane Katrina
- **2002 Winter Olympics:** Delivering situational awareness information to first responders (Federal, State and Local) at the 2002 Olympics in Salt Lake City
- **2004 Florida Hurricane Recovery:** Supporting the massive debris management and FEMA reimbursement effort following the multiple 2004 hurricanes that devastated Florida
- **National Bioterrorism Exercise:** Supplying predictive modeling and decision-support data for the 2003 TOPOFF III national bioterrorism exercise
- **US Army Bioterrorism Preparedness:** Providing the U.S. Army Medical Command (MEDCOM) with automated bioterrorism templates

Learn More

The Previstar Continual Preparedness System is the only intelligent resource and information management system built from the ground up to automate NIMS and guidelines, and provide the most comprehensive system to prepare for, respond to, and recover from any incident or event.
